About us

DTS GmbH - Diamond Tooling Systems

Welcome to DTS - Diamond Tooling Systems GmbH!

Based in Kaiserslautern - Germany - we have specialized in the development, production and distribution of precision tools equipped with ultrahard cutting materials, such as PCD (polycrystalline diamond), CVD-D (CVD thickfilm diamond), UltraDiamond (monocrystalline binderless diamond) and CBN (cubic boron nitride). As a leading manufacturer for tools with laser cutting edges, we offer machining solutions in the areas of turning, milling, grooving, drilling, reaming, threading, and tool holding.

To be able to economically process ultra-hard cutting materials such as PCD, CVD-D and CBN on precision tools we realized early on that we would have to move away from the traditional production technology of „grinding“ to new technologies such as the „laser removal process“. This decision has contributed to the fact that our customers regard us, DTS GmbH, as the pioneer and leading manufacturer of laser tools for machining.

Ultra-hard high-performance cutting materials have a key function in metal-cutting manufacturing. Precision tools equipped with ultra-hard cutting materials are products that require a great deal of explanation. The economical use of the cutting materials is only ensured if the machining process and the cutting material are coordinated with each other.

This is exactly where we at DTS - Diamond Tooling Systems GmbH - step in: Tools and processes are subjected to a comprehensive analysis by our experienced application engineers. Subsequently, the new process optimization is presented to the customer and in the next step, it is implemented in their production. Only in that way is it possible to exploit the optimum potential of our high-tech cutting materials.

Our experienced application engineers are also available to advise you during ongoing production. This close cooperation and mutual trust is the basis of our success.

With more than 25 years of optimization experience in the processing industry, this is where we see our strength!

PASSION FOR DIAMOND...

ultrahard cutting materials at a glance

... is not just a slogan for us - we live this passion in our daily dealings with our customers and we are your partner when it comes to diamond or CBN tools.

Polycrystalline diamond (PCD)

The well-known Standard Diamond

PCD is a synthetically produced, extremely tough, intergrown mass of diamond particles with a random orientation in a metal matrix. It is produced by sintering selected diamond particles under high pressure and high temperatures.

Graphite serves as a catalyst allowing the PDC crystals to intergrow. PCD has a high thermal conductivity and good heat dissipation away from the cutting edge. In addition, PCD has the highest bending fracture strength of all cutting materials.

PCD is very well suited for machining aluminum with a Si content of up to 10% and/or other abrasive fillers. The thermal hardness is about 750°C. The areas of application are like those of CVD thick-film diamond, but CVD thick film has a higher cost effectiveness with hard-brittle materials or aluminum from a Si content of 10%.

CVD-Thickfilm Diamond (CVD-D)

The Star among Diamond Cutting Materials

For the machining of hard-brittle materials such as Ceramics, glass, glass-Ceramics, tungsten Carbide, MMC and fiber-reinforced composites such as CFRP and GFRP. Due to the lack of a bonding matrix, the diamond content is much higher than with PCD. In the group of ultra-hard cutting materials, binderless CVD-D is one of the hardest man-made diamond cutting materials.

CVD-D is characterized by high hardness as well as high wear resistance. These properties make CVD-D the perfect cutting material for machining abrasive materials. Compared to PCD, which is damaged by the abrasive particles due to its soft metallic binder phase, the CVD-D cutting edge remains stable due to its binderless anchoring in the diamond matrix.

With the correct use of CVD-D, the tool life can be increased by up to 10 times (and even more) compared to PCD!

Binderless Diamond (UltraDiamond)

The hardest Mono Crystal

Single-crystal elements are laser-cut from diamond blanks in a defined orientation using laser segmentation technology. This new technology makes it possible, in addition to polycrystalline cutting materials such as PCD and CVD-D, to also braze a monocrystal (UltraDiamond) under high vacuum on any tool carrier. Compared to PCD, the tool life can be increased by approx. 15 to 25 times and compared to CVD-D by approx. 2 to 5 times.

The areas of application are similar to PCD and CVD-D, but this monocrystalline cutting material offers a further significant increase in tool life in all applications where PCD and CVD-D reach the limits of economic viability. The UltraDiamond cutting material makes economical machining of very hard, highly brittle materials such as Ceramics, glass, glass-Ceramics and hard metals with low cobalt binder and nickel binder (<10%) possible.

Polycrystalline Cubic Boron Nitride (CBN)

Chemically resistant and stable at high temperatures

of up to 1,400°C. Boron nitride powder is the starting point for the production of CBN, which has been available since the end of the 1960s. It is produced under high pressure and at temperatures of over 1,500°C and the many different substrates are specifically adapted to the final application.

CBN is now considered the second hardest material after diamond cutting materials!

The applications of CBN take place in the automotive industry, aerospace, tool and die and mold making as well as in mechanical engineering. The wide range as cutting and abrasive material includes hardened steels, cast irons, chilled cast iron, sintered materials, stellites, nickel- and cobalt-based superalloys. In many applications, cubic boron nitride is preferred to diamond cutting materials because it is absolutely stable in air at temperatures up to 1,400°C. Diamond, on the other hand, begins to decompose at a temperature of approx. 750°C. Compared to PCD, CBN is also characterized by its chemical resistance to ferrous materials.

Our Cutting Materials

and their main areas of application at a glance

We want to offer you the ideal solution for your application. Therefore, we also offer you a wide range of cutting materials on our internal turning tools.

Below you will find an overview of the different cutting materials.

PCD Diamond

is ideally suited for the machining of*

Aluminium <10% Si | Brass | Ceramic green compact | Copper | Copper Alloy | Graphite | Magnesium | PEEK | Tungsten Alloy

CVD-D Diamond

is ideally suited for the machining of*

Acrylic (PMMA) | Aluminium >10% Si | Carbide >10%Co | Ceramic | Copper, Copper Alloys | Composites (CFRP, GFRP) | Glass, GlassCeramic | Magnesium | Plastics | Silver, Gold, Platinum | Titanium | Zirconium

UltraDiamond

is ideally suited for the cutting of*

Acryl (PMMA) | Carbide <12%Co | Ceramic | Glas, GlasCeramic

CBN-H

is ideally suited for the machining of*

Steels, hardened up to 72 HRC

Sintered steels, hardened

- continuous cut
- light interrupted cut
- heavy interrupted cut

CBN-K

is ideally suited for the machining of*

Grey cast iron (GG)

Ductile cast iron (GGG)

- continuous cut
- light interrupted cut
- heavy interrupted cut

CBN-X

is ideally suited for the machining of*

HSS, Tool steel

ASP, CPM and other PM steels

Cold and Hot work steels

Solid carbide steel joints

- continuous cut
- light interrupted cut
- heavy interrupted cut

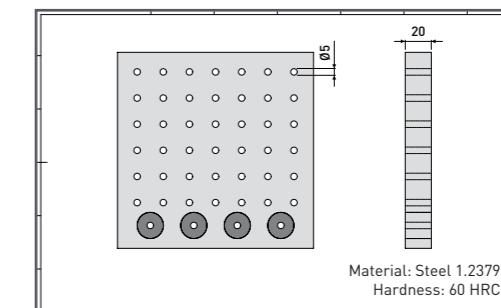

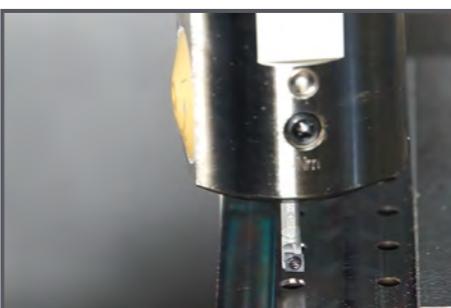

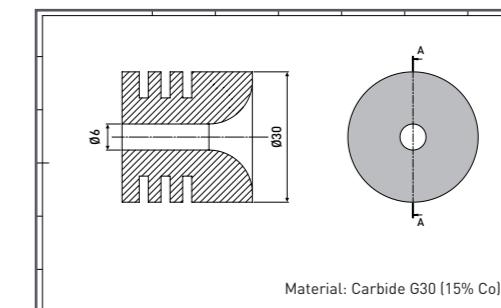

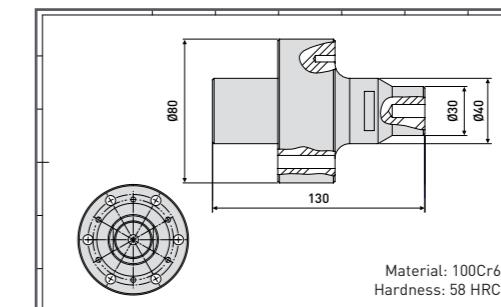

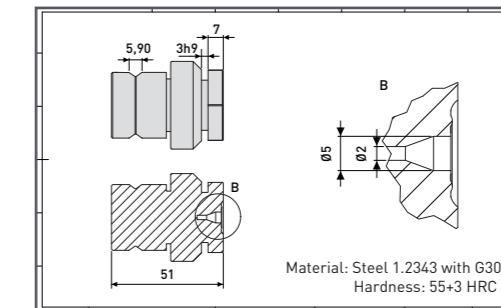

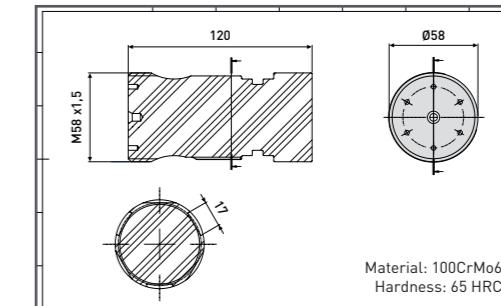

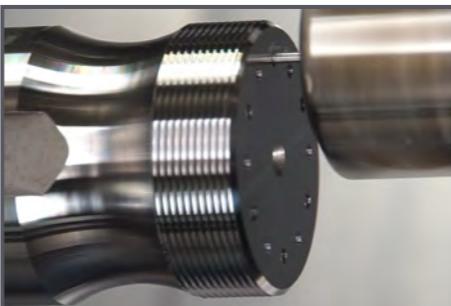

*all other applications can be found in the complete cutting material assignment from page 8

Application Examples

our cutting edges in use

Not only theory - we would like to show you our tools in action. Below you will find a selection of our CBN application videos. Click on the QR code for more information and the video.

CVD-D cutting edges

Our Boring Tools at a Glance

for bore machining and spindling

For the machining on turning and milling centers we offer you two systems for boring starting from Ø1,00mm.

You can choose between soldered tools and a system with carbide boring bars and indexable inserts.

Brazed Precision Boring Tools

starting from Ø 1,00mm

- ✓ Corner Radius 0,10 - 0,40mm
- ✓ Carbide Shank
- ✓ Up to four machining depths per Ø for optimum rigidity
- ✓ Easy alignment due to adjustment bevel and clamping surface

from page 12

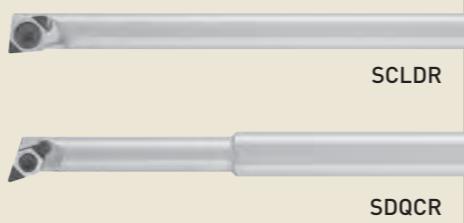

MiniTools – with multi-edged Inserts

starting from Ø 3,50mm

- ✓ Corner Radius 0,10 - 0,40mm
- ✓ Low Vibration Carbide Design
- ✓ High efficiency due to multi-edged inserts
- ✓ Easy alignment due to adjustment bevel and clamping surface

from page 21

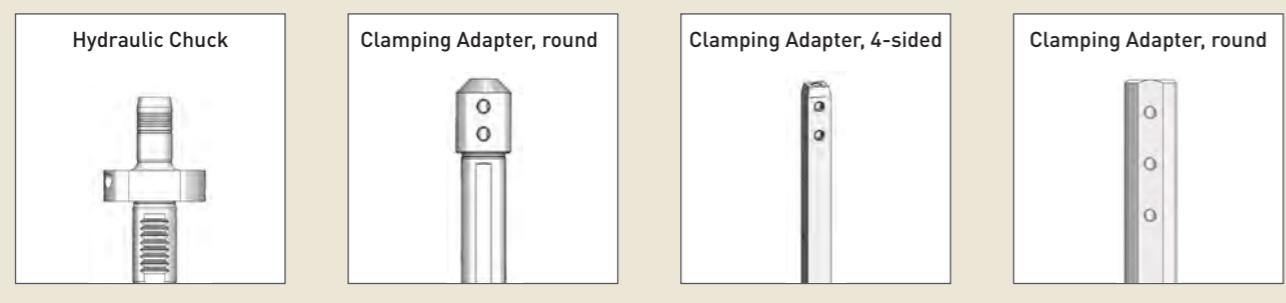

Matching Clamping Adapters

- ✓ Boring Bar adjustable in length
- ✓ Exact positioning of the cutting edge

Cooling through the clamping surface of the tool possible for all holders.

from page 36

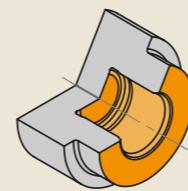

Application Possibilities

of our Precision Boring Tools

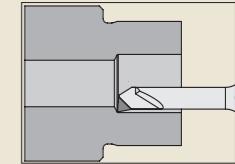

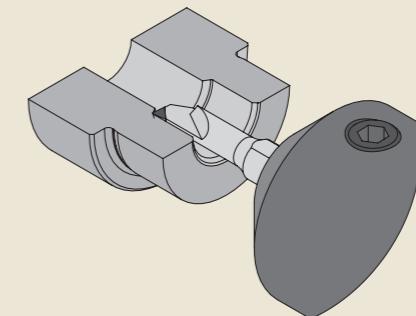

To adapt our boring tools perfectly to your application, we have two different types in our standard program. These enable you to use ultra hard cutting materials to reliably machine cylindrical and conical surfaces with radial transitions as well as flat surfaces.

Type BS

starting from Dmin 1,00mm

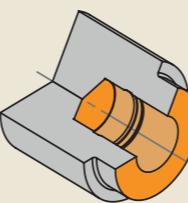

all colored surfaces can be machined

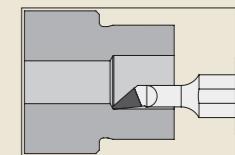

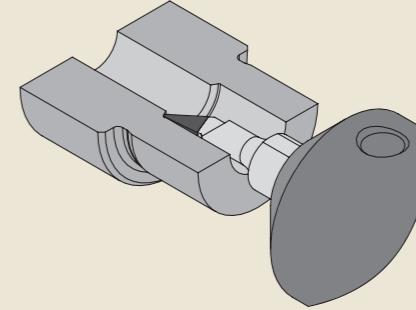

Robust system for turning contours in bores.

Type BE

starting from Dmin 3,60mm

all colored surfaces can be machined

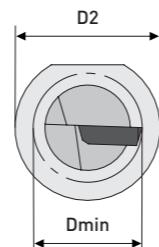

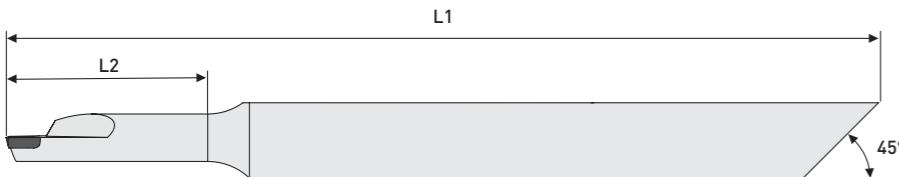

For contour turning on the plane surface.

Precision boring bars

brazed cutting edge for internal machining from Dmin 1,00 mm

Typ BS

Your notes

Application range:

- PCD Aluminum <10% Si, Brass, Brass lead-free, Graphite, Titanium [Roughing] ...
 - CVD-D Acrylic, Aluminum >10% Si, Carbide, Ceramics, Composites [CFRP, GFRP, MMC], Copper, Plastics, PEEK, Titanium [Finishing] ...
 - CBN Steel hardened up to 72 HRC, Tool Steel up to 72 HRC, powder metallurgical Steel ...

MiniTools

Carbide Boring Bars and multi-edged Inserts tipped with Diamond or CBN

Boring Tools with Carbide Tool Holders:

- ✓ Highly economical due to multi-edged inserts
- ✓ Starting from bore Ø 3,5mm
- ✓ Low vibration carbide design
- ✓ With inner cooling
- ✓ For internal turning on lathes
- ✓ For spindle turning on milling machines

Large selection of multi-edged indexable inserts!

Application range of our diamond indexable inserts:

- ✓ All abrasive non-ferrous materials
- ✓ Aluminum
- ✓ Carbide G-Grade
- ✓ Carbide K-Grade
- ✓ Carbide with Ni Binder
- ✓ Ceramic Materials
- ✓ Composite such as CFRP / GFRP
- ✓ Copper Alloys
- ✓ Glass and Glass Ceramic
- ✓ MMC
- ✓ Other brittle non-ferrous materials
- ✓ Titanium (Finishing)

Application range of our CBN indexable inserts:

- ✓ Cast Iron
- ✓ Special Alloys such as ASP, CPM, Hardox
- ✓ Steel hardened up to 72 HRC
- ✓ Stellite
- ✓ Tool Steel up to 72 HRC

VCGW 050104	3,10	1,59	0,40	DP2010-0563	DP1110-1502

Application range:

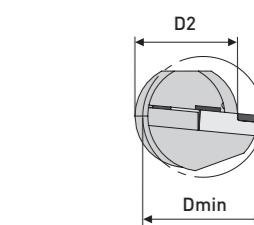

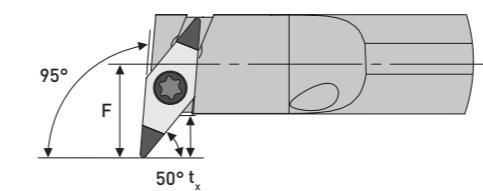

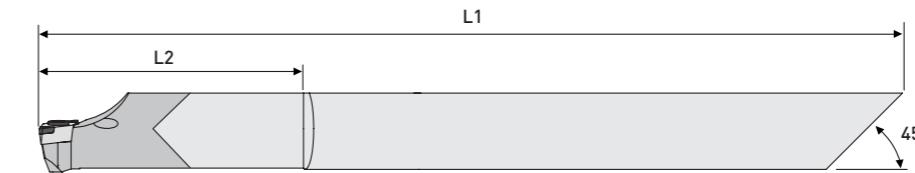

- CVD-D Aluminum, Carbide >10%Co, Brass, Brass lead-free, Graphite, Composites [CFRP, GFRP, MMC], Titanium ...
- UltraDia. Acrylic, Ceramics, Carbide <12%Co, Zirconium ...
- CBN-H Steel hardened up to 72 HRC
- CBN-K Grey Cast Iron (GCI), Ductile Cast Iron (DCI) ...
- CBN-X Tool Steel hardened up to 72 HRC, Tool Steel low alloy, Stellite, powder metallurgical Steel ...

Suitable clamping adapters can be found from page 36 onwards.

You will find further application ranges in the detailed overview from page 8.

Your notes

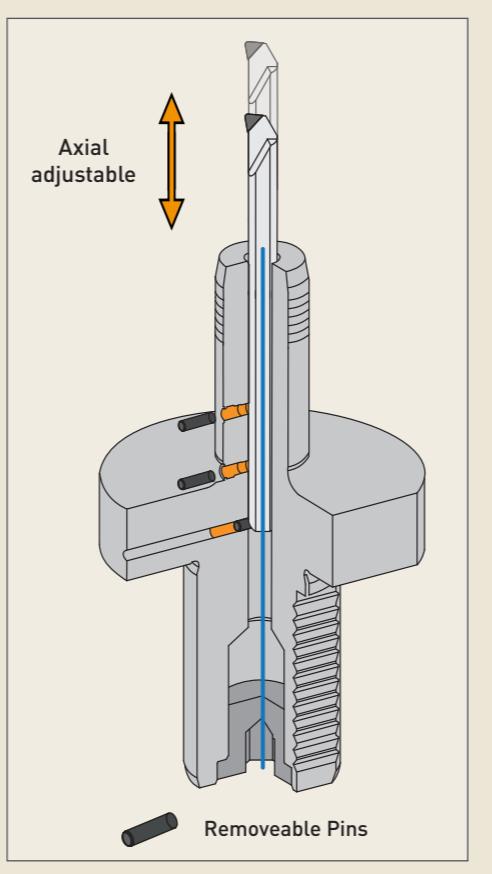

--

Clamping Systems

Hydraulic Expansion Chuck

Take advantage!

- ✓ High damping
- ✓ Tool life increase up to approximately 30%
- ✓ Automatic cutting edge adjustment
- ✓ Excellent surface quality
- ✓ High dimensional stability
- ✓ Easy and quick change of the boring bar

Functionality

Automatic adjustment of center height through pin, resulting in a very high repeat accuracy

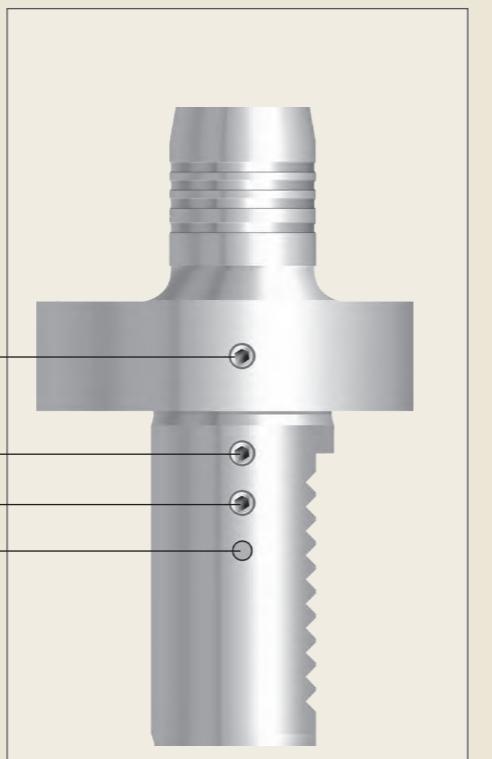

This gives you a very high repeat accuracy.

Cooling through the clamping surface

Adjustment Guide

for tool change

1. Loosen screw 4
2. Insert boring bar
3. Turn tool slightly at stop until resistance is felt
4. Tighten screw 4 with max. 10Nm

-> Tool ready for use

Extended length too long?

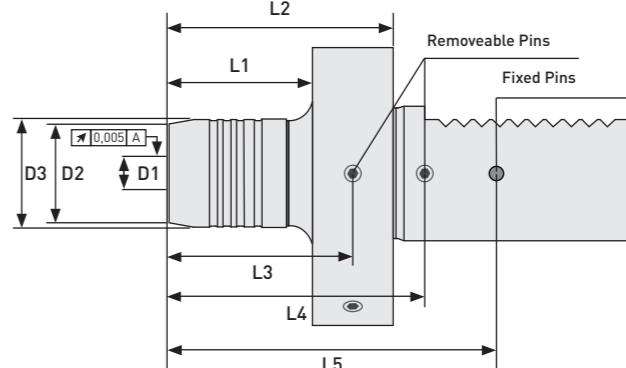

1. Loosen screw 4
2. Remove threaded pin 1 (if necessary 2 also)
3. Remove alignment pin
4. Insert threaded pin 1 (if necessary 2 also)
5. Repeat adjustment guide from point 2

*Positioning of alignment pins may deviate due to manufacturing process

Hydraulic Chuck

with VDI-Holder

for brazed boring tools and MiniTools

Clamping Systems

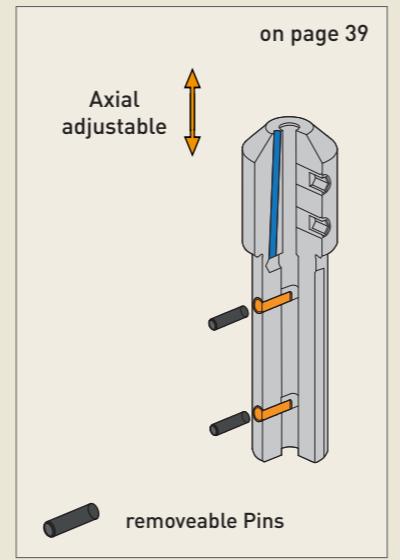

Clamping Adapter round or 4-sided

Take advantage!

- ✓ Excellent surface quality
- ✓ High dimensional stability
- ✓ High repeat accuracy

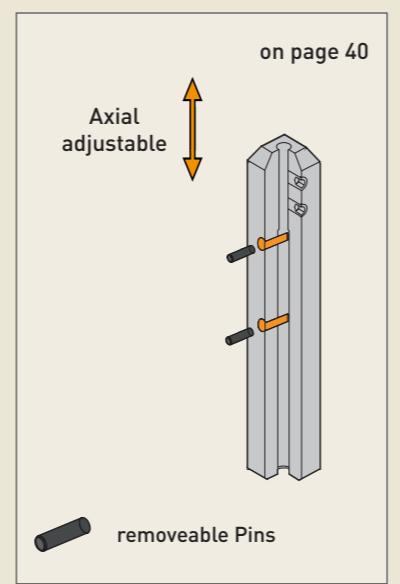

Functionality

- ✓ Automatic adjustment of center height through pin and 45° bevel on the tool
- ✓ Safe and stable positioning of the tool due to the 3-point fixing system
- ✓ Defined coolant supply 
- ✓ Adapter with shank tolerance Ø16h6

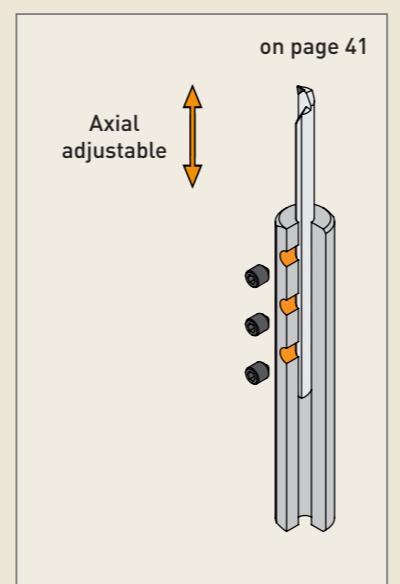

Functionality

- ✓ Automatic adjustment of center height through pin and 45° bevel on the tool
- ✓ Safe and stable positioning of the tool due to the 3-point fixing system
- ✓ Grinded 4-sided for flexible use in almost all processing machines
- ✓ General coolant supply through clamping surface 
- ✓ Also suitable for use in conventional and NC machines

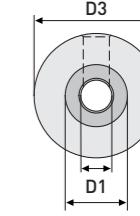

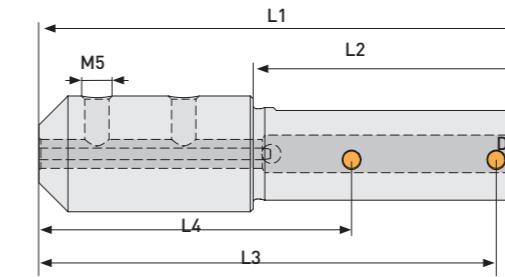

Functionality

- ✓ Clamping adapter with full-length shank
- ✓ Compatible with standard boring bar holders, D16.0mm
- ✓ Also suitable for use in conventional and NC machines
- ✓ Flexible length adjustment
- ✓ Stable clamping via 3 screws
- ✓ Space-saving and suitable for small machines

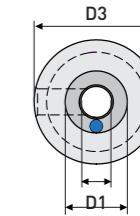

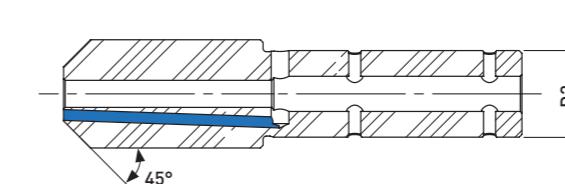

Clamping Adapter

Cooling recommended

In machining with CBN inserts, proper cooling is a key to successful machining.

Here you will find our recommendation:

When machining interrupted cuts, we recommend dry machining or cooling by air.

Material	Cooling				
	Dry	Air	Emulsion	Oil	MQL
Steel hardened to 42 HRC		3. Choice	1. Choice	2. Choice	
Steel hardened to 52 HRC		3. Choice	1. Choice	2. Choice	
Steel hardened to 60 HRC		3. Choice	1. Choice	2. Choice	
Steel hardened to 68 HRC		3. Choice	1. Choice	2. Choice	
Ni-, Co-, Fe- u. Cr-Alloys		3. Choice	1. Choice		2. Choice
Powder Metallurgical Steels, Hardened Cold and hot Work Steels, hardened		3. Choice	1. Choice	2. Choice	
Tool Steel and HSS, hardened		3. Choice	1. Choice	2. Choice	
Titanium			1. Choice		2. Choice
Carbide >20%Co	on request				
Carbide-Steel Composite	on request				

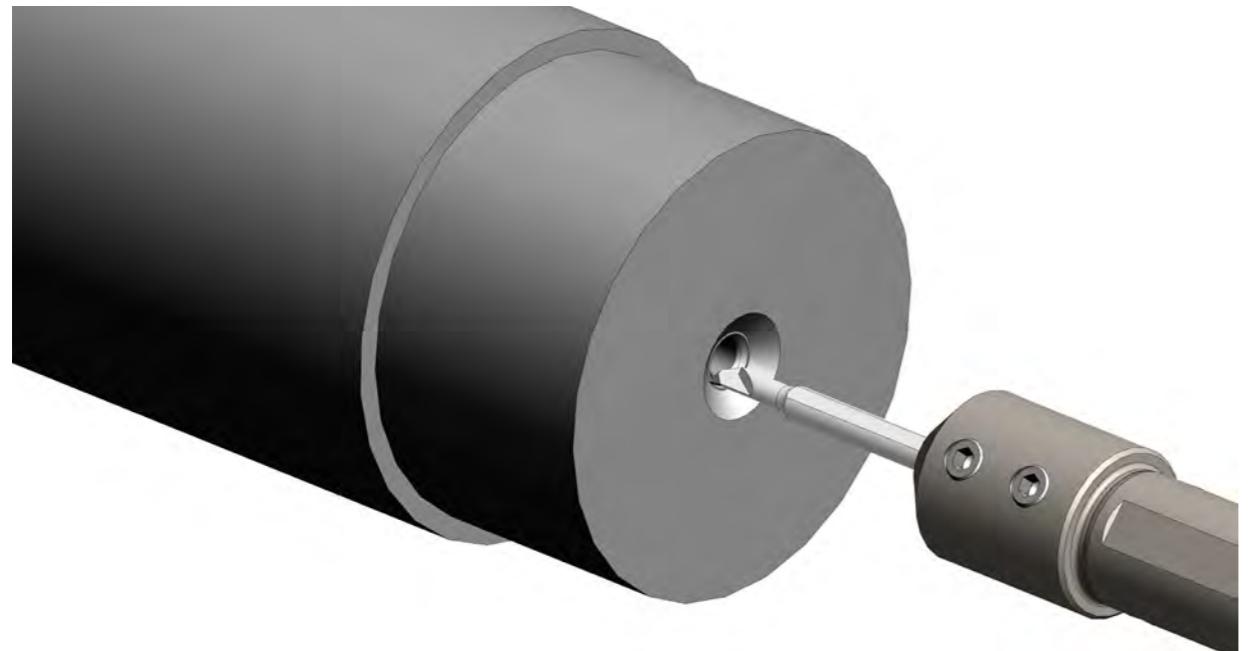

If you have any further technical questions, please do not hesitate to contact us by phone or e-mail!

Formulas

Turning

V_f	Feed rate	mm/min
f_n	Feed per revolution	mm/rev
n	Spindle speed	rev/min
v_c	Cutting speed	m/min
D_c	Cutter diameter	mm
t_c	Cutting Time	min
l_m	Cutting length	mm
Q	Stock removal rate	cm³/min
a_p	Cutting depth	mm

► Cutting speed

$$v_c = \frac{D_c \times \pi \times n}{1000} \quad [\text{m/min}]$$

► Spindle speed

$$n = \frac{v_c \times 1000}{\pi \times D_c} \quad [\text{rev/min}]$$

► Feed per revolution

$$f_n = \frac{V_f}{n} \quad [\text{mm/rev}]$$

► Cutting time

$$t_c = \frac{l_m}{f_n \times n} \quad [\text{min}]$$

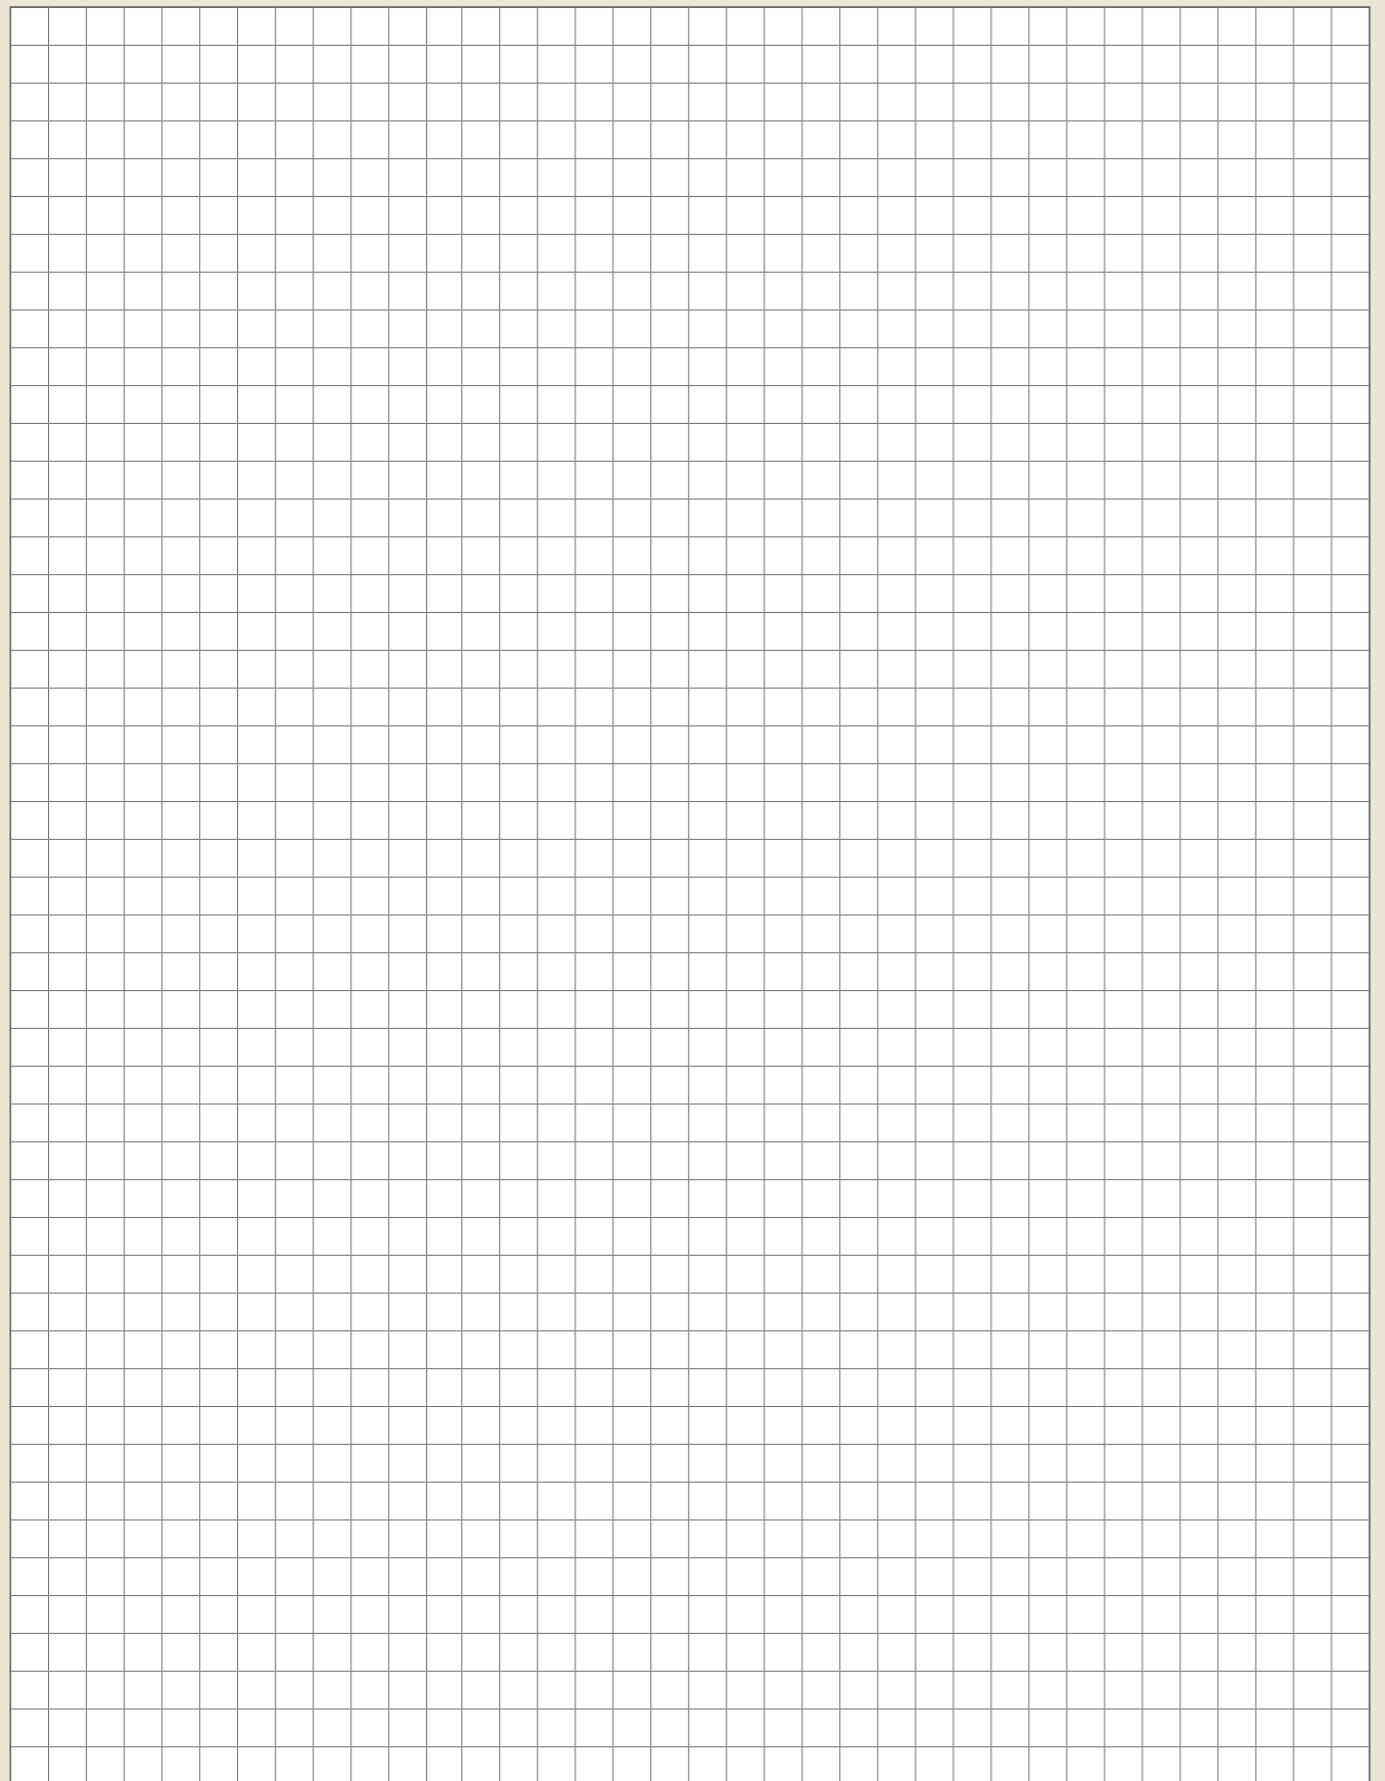

► Stock removal rate

$$Q = v_c \times a_p \times f_n \quad [\text{cm}^3/\text{min}]$$

Copyright:

The reprint of our catalogs, copies of our flyers and newsletters or only excerpts such as illustrations, designs, technical information and design require the written permission of DTS GmbH. Copies or only excerpts such as illustrations, designs, technical information from our homepage and our online store are only permitted with the written consent of DTS GmbH.

All rights are reserved. Errors, misprints or printing errors do not entitle to claims. The pictorial and graphic representation of our tools do not necessarily have to correspond to the actual tool in all details.

We reserve the right to make production-related technical changes and changes to the delivery program. The cutting values given are guide values which must be adjusted according to the process environment.

Safety Instructions:

- ▶ DTS tools equipped with ultra-hard cutting edges are very sharp laser cut tools.
- ▶ Careful handling of the tools during unpacking and their use is recommended.
- ▶ Wearing protective gloves reduces the risk of injury.
- ▶ Material chipping and tool breakage may occur during machining, wearing safety glasses is recommended.
- ▶ Balanced holders are recommended for speeds above 10,000 rpm.
- ▶ We do not accept any responsibility for tools that have been modified, reground or used incorrectly and beyond their normal service life.
- ▶ Protective goggles are recommended when using DTS tools, sparks may also occur, make sure that no fire can occur.
